

SKOTSKO 2016

AMSTERDAM

RIJKSMUSEUM

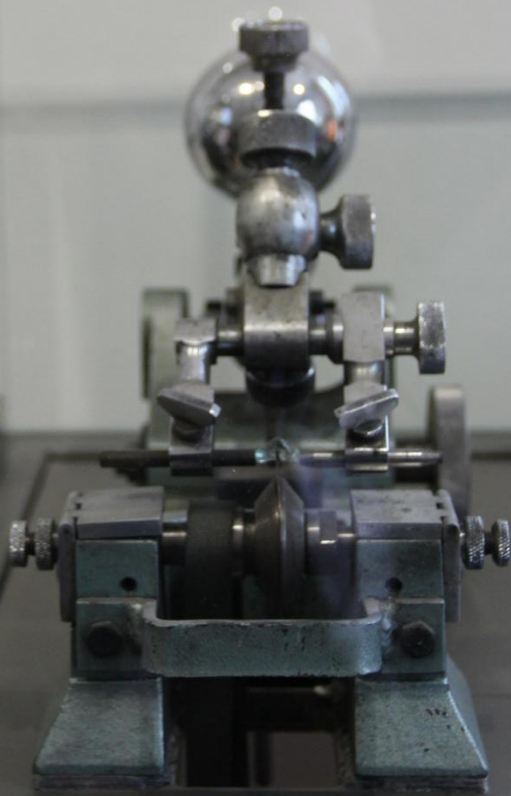

COSTER DIAMONDS

Sawing

The phosphor – bronze blade rotates at 6000 rpm and is coated with diamond dust mixed with oil. It can take up to eight hours to saw a 1 carat diamond into two parts.

A large offshore oil rig, the PARAGON C453, is being moved by a tugboat in a harbor. The rig has two tall derrick cranes and is mounted on a white barge. A red and white Danish flag is visible in the foreground on the left, and a glass of beer is in the bottom right corner.
